

SAN JOSE, Calif., May 17 /PRNewswire/ -- Ajaxo debuts DOLFIN technology at the annual conference and exhibition for health IT professionals in Towards Electronic Patient Record (TEPR2007), in Dallas, Texas on May 21-23.

DOLFIN technology is an invention that enables integration of data, multimedia, and image authoring. DOLFIN is a Web based development tool for building high-performance, secure, session based Web applications. For enterprise applications where time and cost are critical factors, DOLFIN provides the solution at 90% savings in time and cost when compared to conventional application development methods.

The DOLFIN technology enables users with no IT background to create Web based application. DOLFIN automatically creates the optimal SQL databases as the backend data structure to assemble it into a finished product.

DOLFIN EHR, an electronic health record application for physicians and healthcare organizations, was the pilot project developed utilizing the DOLFIN technology. The technology enables DOLFIN EHR to provide efficient and affordable electronic health record that is adaptive to individual physician's style of practice.

"I anticipated many more issues implementing an entirely new system into our office, and am impressed on how little disruption there was to my practice. It is an easy system to use, and it is constantly being adapted to my needs," said Dr. Stuart Schlisserman\*, "Before deciding on an EHR, I wanted a system which was not expensive, easy to use, with Web-based access for me and my patients, and with a responsive customer service team. I found this with Ajaxo's DOLFIN EHR".

The success of the DOLFIN EHR development demonstrated that DOLFIN technology revolutionizes the life cycle of application development, making it possible to bring high-quality, customized solution at an incredible value and speed to all enterprises worldwide.

"We selected electronic health record (EHR) as our pilot project because providing an EHR application that is adaptive to each physician is a very challenging task," said Connie Chun, Ajaxo Director of Marketing, "Utilizing the DOLFIN technology, we are able to bring the price down to offer physician a customized Web based EHR including future enhancements and maintenance at a low monthly fee of \$300 per physician."

The DOLFIN innovation enables Ajaxo to deliver low cost, high-performance, Web based applications in United States with time and price advantage that rival the lowest cost offshore development.

#### About Ajaxo

Ajaxo has earned its reputation in providing "Innovative and Quality" products and services to its customers. Since its formation in 1999, Ajaxo has deployed its advanced information technologies servicing enterprises worldwide.

#### About Stuart Schlisserman, M.D.
